

INSTA-VALVE 250 SUCCESS STORY

INSTA-VALVE 250 ISOLATES LEAKING PIPE AND AVOIDS WATER DISRUPTION TO ENTIRE ISLAND

THE CHALLENGE

The Village of Bald Head Island discovered one of their water mains was leaking. Roots from nearby vegetation had pushed a tapping saddle out of position, causing wear on the tap that eroded the pipe over time. Unfortunately, due to its location, there was no valve to isolate the area without shutting down the water system to the entire island, which was required just a week prior for a different repair. The island's Public Services Director, JP McCann, wanted to avoid another island-wide shutdown, especially during the peak season when their population expanded to around 12,000 people.

THE SOLUTION

Having worked with Garrison Enterprise Inc. previously, JP called their Regional Manager, John Hamling, to explore utilizing the Insta-Valve 250 insertion valve to isolate the area of repair. With a solution in hand, John and his team made the journey to the island by barge, arriving around 1 PM. Once onsite, the Garrison crew surveyed the worksite and discovered that the ground cover was insufficient and utility cables ran along both sides of the 10" PVC pipe, making a side install impossible. Thanks to the versatility of the Insta-Valve 250, the crew was able to install the valve at a 22-degree angle and successfully isolate the leaking pipe. John and his team were back on the barge to the mainland by 4 PM, and the Bald Head Island crew were able to complete their repairs without impacting service to the entire island.

PROJECT IMPACT

The installation of the Insta-Valve® 250 allowed the Village of Bald Head Island to isolate and repair a leaking water main without shutting down service to the entire island during peak season. By avoiding an island-wide outage, the Village preserved water service for residents and visitors, prevented revenue loss and boil orders, and added a permanent, reusable control point that improves long-term system reliability.

Thanks to the Insta-Valve 250, we were able to avoid significant service disruptions during the island's busiest season. — JP McCann, Public Services Director, VILLAGE OF BALD HEAD ISLAND
